Project Expenses Tracker

Thailand Fieldtrip Edition

thai.expenses.syaefulaz.my.id

Document ID	BRD-TXC-EXP-2025-001
Version	v1.4 — Loan & Settlement Feature
Date	May 2025
Domain	thai.expenses.syaefulaz.my.id
Classification	Internal — Confidential
Author	IT Head, Texcoms Worldwide
Status	Draft for Review & Design

This document is confidential and intended solely for the use of Texcoms Worldwide. Unauthorized distribution or reproduction is prohibited.

1. Document Purpose

This Business Requirements Document (BRD) defines the minimum functional and non-functional requirements for developing a Project Expenses Tracker system for Texcoms Worldwide's Thailand fieldtrip operations. The system is hosted at `thai.expenses.syaefulaz.my.id` and serves as the single source of truth between business stakeholders and the development team.

2. Executive Summary

Texcoms Worldwide requires a centralized digital system to track, record, and report project-related expenses for the Thailand fieldtrip across multiple projects and cost centers. The current process relies on scattered spreadsheets, leading to delayed reporting, duplicated entries, and poor visibility into actual vs. budgeted spend.

The Project Expenses Tracker will serve as the authoritative system for:

- Logging real-time project expenditures
- Categorizing expenses by type, project, and cost center
- Tracking loans and settlements between team members (Dina, Syaeful, Winda)
- Generating financial reports for management review
- Controlling access based on organizational roles

3. Company Overview

3.1 About Texcoms Worldwide

Field	Detail
Company Name	Texcoms Worldwide
Industry	IT Solutions & Services
Headquarters	Bandung, West Java, Indonesia
Operations	Serving clients across Southeast Asia and India
IT Maturity	Google Workspace ecosystem; N8N automation, Google Sheets, MySQL, Linux server infrastructure

3.2 Project Context

This project targets the Thailand fieldtrip operations team. The system will be deployed at `thai.expenses.syaefulaz.my.id` and must support the team's workflow of logging, approving, and reporting project expenses in IDR currency, with loan tracking denominated in THB.

4. Business Objectives

#	Objective	Measurable Outcome
BO-01	Centralize expense recording	Single source of truth — zero parallel spreadsheets
BO-02	Reduce monthly close cycle	Close reports within 3 business days vs. current ~7 days
BO-03	Improve budget visibility	Real-time actual vs. budget comparison per project
BO-04	Enforce approval workflows	100% of expenses processed through defined approval chain
BO-05	Enable audit-ready reporting	Exportable records with full audit trail
BO-06 [NEW]	Track loans & settlements	Transparent IOOU tracking between Dina, Syaeful, and Winda

5. Scope of Work

5.1 In Scope

- Expense entry, editing, and deletion with expense_date (date of occurrence)
- Source tracking (cash, ATM, personal funds of each team member)
- Loan declaration, partial repayment, and settlement workflow
- Project and cost center management
- Category and subcategory configuration
- Dashboard with KPIs, budget utilization, and loan summary
- Exportable reports (PDF, Excel)
- User access control (Role-Based Access Control)

5.2 Out of Scope

- Invoice generation or accounting software integration
- Payroll or personnel cost tracking
- Mobile native application (web-based only for v1.0)
- Multi-currency support (IDR for expenses; THB for loan tracking in v1.0)
- Integration with third-party payment gateways

6. User Roles

Role	Code	Description
Project Manager	PM	Creates and manages expenses for assigned projects
Finance Staff	FIN	Validates, approves, and reconciles expenses
Finance Manager	FM	Final approval authority; accesses all projects
IT Administrator	ADMIN	System configuration and user management
Director / C-Level	DIR	Read-only access; executive dashboard and reports

Note: For Thailand fieldtrip v1.0, the primary users are Dina, Syaeful, and Winda. Role assignment for these three users will be defined during deployment.

7. Functional Requirements

7.1 Expense Management

ID	Requirement	Priority
FR-01	Users shall be able to create a new expense record with: expense_date (date when expense occurred, NOT submission date), amount (IDR), category, description, source (e.g. Winda Cash, ATM Syaeful, Dina's Personal), project, cost center, and attachment (receipt/image).	Must Have
FR-02	Users shall be able to edit their own submitted expenses while status is Draft.	Must Have
FR-03	Users shall be able to delete their own draft expenses.	Must Have
FR-04	Users shall be able to submit a draft expense for approval, changing status to Pending.	Must Have
FR-05	Finance Staff shall be able to approve or reject pending expenses with a comment.	Must Have
FR-06	Finance Manager shall be able to final-approve or reject approved expenses with a comment.	Must Have
FR-07	All expense status transitions shall be logged in an audit trail.	Must Have
FR-08	Expenses with status Rejected shall be returned to the originator for revision and resubmission.	Must Have

7.2 Loan and Settlement Tracking [NEW]

ID	Requirement	Priority
FR-09	When a user records an expense where the SOURCE belongs to another user (e.g. Syaeful spends from Winda's cash), the system shall automatically create a LOAN record: lender = source owner, borrower = recorder, amount = expense amount, status = UNSETTLED.	Must Have

ID	Requirement	Priority
FR-10	The lender shall be able to declare an expected repayment amount on their dashboard (e.g. Syaeful says "I will repay 1500 baht"). This updates the loan's declared_repayment_amount field.	Must Have
FR-11	The lender shall be able to record an actual repayment, which may be partial or full. The system shall track: actual_repaid_amount (how much was actually paid), remaining_balance (declared minus actual), and settlement status (PARTIAL / FULLY_SETTLED / OVERPAID).	Must Have
FR-12	Each user's dashboard shall display: (a) total outstanding loans owed TO them (they are the lender), (b) total outstanding loans they owe TO others (they are the borrower), (c) per-person breakdown with remaining balance.	Must Have
FR-13	Loan records shall appear in the expense audit trail and reports.	Should Have

7.3 Project and Budget Management

ID	Requirement	Priority
FR-14	Administrators shall be able to create and manage projects (name, code, start date, end date, total budget).	Must Have
FR-15	The system shall track budget utilization percentage per project in real time.	Must Have

8. Non-Functional Requirements

ID	Requirement
NFR-01	Performance: Dashboard loads within 3 seconds under normal conditions.
NFR-02	Availability: System available 99% uptime during business hours.
NFR-03	Security: All data transmitted over HTTPS; passwords hashed with bcrypt.
NFR-04	Data Integrity: All financial amounts stored with 2 decimal precision.
NFR-05	Auditability: All state changes logged with timestamp and actor.

9. Assumptions and Dependencies

ID	Assumption
A-01	All three users (Dina, Syaeful, Winda) have Google Workspace accounts for authentication.
A-02	The system will be hosted on Texcoms VPS at thai.expenses.syaefulaz.my.id.
A-03	Expenses are denominated in IDR; loans/settlements are tracked in THB.
A-04	Each user manages their own cash/ATM funds; no corporate imprest fund exists.

10. Acceptance Criteria

The system will be considered accepted when all of the following criteria are satisfied:

#	Acceptance Criterion
AC-01	An expense recorded with source = "Winda Cash" by Syaeful automatically creates a loan record visible on Winda's dashboard.
AC-02	Winda can declare an expected repayment amount from her dashboard, and the system displays the correct remaining balance.
AC-03	Winda can record an actual repayment (partial or full), and the system updates the remaining balance accordingly.
AC-04	Both dashboards show mirrored, accurate outstanding balances (lender sees what is owed to them; borrower sees what they owe).
AC-05	PDF and Excel exports include loan settlement summaries alongside expense data.
AC-06	All expense records include expense_date (date of occurrence) distinct from created_at (submission timestamp).
AC-07	Budget utilization percentage is displayed in real time per project on the dashboard.
AC-08	Expense approval workflow enforces: Draft → Pending → Approved → Final Approved (or Rejected at each stage).
